

CityWeather — GitHub README

A full-stack weather web application that lets users search for cities worldwide, view real-time weather data, save favorite locations, compare weather conditions visually, and pin locations on an interactive map.

Features

- Search weather by city
 - View live weather data
 - Save favorite cities
 - Compare weather conditions visually
 - Pin locations on an interactive map
 - Supabase database integration
 - Vercel deployment ready
-

Tech Stack

Node.js, Express.js, Supabase, OpenWeatherMap API, HTML/CSS/JavaScript, and Vercel.

Installation

Clone Repository

```
git clone https://github.com/YOUR_USERNAME/cityweather-app.git
cd cityweather-app
```

Install Dependencies

```
npm install
```

Environment Variables

```
SUPABASE_URL=https://your-project.supabase.co
SUPABASE_KEY=your_supabase_anon_key
WEATHER_API_KEY=your_openweathermap_api_key
```

Running the App

```
npm start
```

Development mode:

```
npm run dev
```

API Endpoints

GET /api/cities
POST /api/cities
GET /api/weather/:city
DELETE /api/cities/:id

Deployment

1. Push code to GitHub
 2. Import repo into Vercel
 3. Add environment variables
 4. Deploy
-

Known Issues

- Duplicate city names can cause ambiguity
 - API rate limiting may occur
 - No duplicate city detection yet
-

Future Roadmap

- User Authentication
 - 5-Day Forecasts
 - Search Autocomplete
 - Weather Alerts
 - Offline Support
 - Automated Tests
-
